<https://github.com/rongeronomo>

I'm an ardent and driven student, committed to securing an internship role to channel my passion, enthusiasm, and creativity toward contributing to innovative projects within the industry. Eager to maximize my potential in seeking the gap between theory and practice and applying my expertise to achieve tangible results.

## EDUCATION

**Bachelor of Science in Computer Science -  
specialized in Intelligent Systems**

**De La Salle University - Dasmariñas**  
August 2021 - Present

**3.83 - 3.09 GPA (Highest - Lowest)**

## TECHNICAL COMPETENCE

- Python
- Pandas, NumPy, SciPy, scikit-learn
- PHP, Insomnia
- HTML, CSS, JavaScript
- Git Bash
- Google Workspace
- Microsoft Suite

## SKILLS

- Communicated effectively with clients, coworkers, and managers, ensuring clarity, professionalism, understanding of technical concepts, project updates, and client demands.
- Facilitated effective communication within the team, leading brainstorming sessions, collaborating in code reviews, providing technical guidance, and enhancing software diagnosis and debugging, ensuring seamless collaboration and successful project outcomes.
- Created structural flowcharts to break down tasks, optimizing workflow management with Kanban boards.
- Exhibited strategic leadership skills by guiding teams through complex decisions, fostering a collaborative environment, and ensuring alignment with project goals.

## PROJECT EXPERIENCE

### Key Collaborative Projects

#### Flow

- Designed a simple kanban board application
- Developed using HTML, CSS, and JavaScript

#### Attention-Based CNN Model for Classifying Synthetic Images Using the CIFAKE Dataset: Image Classification of AI-Generated Synthetic Images

- Created a system that can distinguish Real vs. AI images
- Improved accuracy using attention mechanisms

#### Emoculus: A Real-Time Emotion Detection System for Safe Driving

- Programmed using Python
- Utilized OpenCV library for face detection, image datasets, and facial landmarks.

#### Twitter Sentiment Analysis of Israel-Palestine Conflict using Machine Learning

- Created own model by leveraging different machine learning algorithms

#### EmoWarn: Fake News Classification with Embedded Emotion Warning System

- Programmed using Python
- Created own emotion classifier model by utilizing NLP
- Integrated own fake news classifier by using a machine learning algorithm

## CERTIFICATIONS

- **Microsoft Python Development Professional Certificate** (2024)
- **Networking Basics** (2025)
- **Linux Essentials** (2025)
- **Building Web Applications in PHP** (2024)
